

SELFRAG AG with its headquarters in Kerzers, Switzerland, is an ambitious technology company with worldwide exposure in the mining, recycling and pure silicon business; developing, manufacturing, selling and installing lab equipment and industrial plants.

SELFRAG AG is the first and only supplier who has made this technology commercially available for various industrial applications.

To support our team, we are looking for a:

Silicon & Glass Project engineer 100% (m/f)

with immediate effect or as per agreement.

Your main assignments:

- Support sales team in acquiring new orders by preparing and operating the demo system at Selfrag
- Support project team during design and construction phase
- Actively executing the commissioning and startup of the high voltage crushing systems at customer's site
- Initiating design improvements and qualifying these new components
- Travelling – up to 20% -30%

Profile & Mindset:

- Electronic or mechanical engineer / technician
- Experience in building and commissioning production equipment
- Experience in electrical and/or mechanical design
- Commitment and flexibility are one of your strengths
- Hands on mentality
- Willingness to work with different cultures (mainly Asia/China)
- Fluency in English is a must, German is of advantage
- Readiness to work with various teams (sales, mechanical design and electronic/control)

We offer a good working environment, up to date working conditions, interesting and diverse work in a small team as well as room for your ideas to unfold.

A young and dynamic team with a zest for action is looking forward to you!
